What is Daycarewebwatch.com?

Daycarewebwatch is a service provided by the leading daycares in your community. The system allows you to share in your child's day by delivering live video from your child's classroom. Virtually anywhere that there is an Internet connection is now a conduit into your child's daycare.

Can the grandparents have an account?

Absolutely. Every day grandparents from all over the world "tune in" to see their grandchildren. Many have never seen them in person and Daycarewebwatch gives them an opportunity to get to know them.

Who has access to see my children?

Your child's centre messages all of the accounts for your daycare. Only authorized users (parents, grandparents) will have access to your child's room. You will not be able to see into other rooms and likewise parents with children in other rooms will not be able to see into yours.

What is your security like?

We use the best security possible. Everyone has a unique password and all activity is monitored.

Will I be able to log in from work?

Virtually every large corporation in North America, including Government agencies allow our system to work. Unlike other systems Daycarewebwatch is not a bandwidth hog. Also, there are no firewall issues with Daycarewebwatch.

It is our policy to ask you not to take pictures from the Web Watch for the privacy of all of the families. In your registration package we will give you the sign up information. This service is free to all registered families.
